Precision Irrigation Intelligence Panel

Saskatchewan Regional Farm Asset Tracking Cluster - Coordinates: 52.1327, -106.6643

Real-Time Evapotranspiration (ET) & Spatial Hydrology Report

Soil Surface Evaporation Rate:

1.8 mm / day

↑ Atmospheric Loss

Net Crop Moisture Requirement:

2.3 mm / day

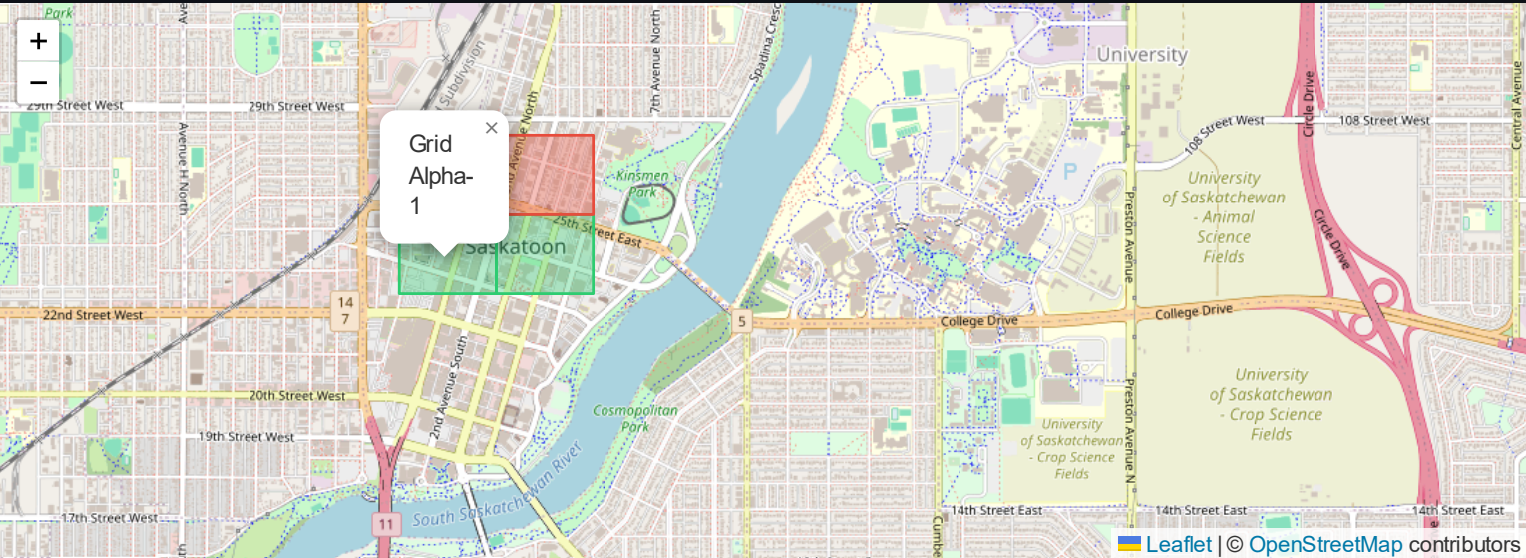

↑ Net Plant Demand

Combined Daily Evapotranspiration (ETC):

4.1 mm

↑ System Balance Managed

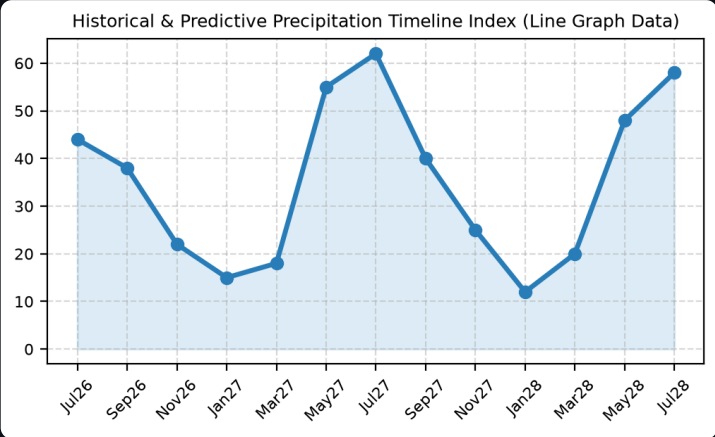

High-Resolution Spatial Crop Health & Water Stress Grid Matrices

Zone Alpha: Optimal Turgidity / High NDVI Matrix

Zone Beta: Moisture Deficit / Drip Irrigation Trigger Active

 Long-Range 2-Year Climate Precipitation Analysis (July 2026 - July 2028)

 FAO Spatial Soil Classification

FAO Soil Classification Map: Orthic Dark Gray Chernozem (Medium Loam Matrix). Highly productive agricultural soil structure requiring scheduled sub-surface drip configuration.

 Live Synoptic Meteorology & Weekly Irrigation Scheduling Matrix

Day / Jour	Temp (°C)	ET (mm)	Irrigation Requirement
Mon / Lun	24	4.1	45 min
Tue / Mar	26	4.5	50 min
Wed / Mer	25	4.3	45 min
Thu / Jeu	21	3.8	0 min (Rain)
Fri / Ven	22	3.5	0 min
Sat / Sam	23	3.9	40 min
Sun / Dim	25	4.2	45 min

 Technical Engineering Operational Directives:

ANALYSIS SUMMARY: Current localized temperature tracking at 24°C with a baseline daily ET of 4.1mm. Soil Moisture Index registers at 42% storage capacity. ACTION REQUIRED: Initiate sub-surface drip irrigation loops on Grid Plot B and Plot D for 45 minutes during dusk cycles to maximize Water Use Efficiency (WUE) and mitigate wind drift loss.
