

Digital Irrigation Intelligence - Gode Zone

Daily Precision Evapotranspiration & Crop Water Needs Metrics.

Daily Evapotranspiration (ET) Metrics Report

Soil Evaporation Level Today:

2.4 mm / day

↑ High Evaporation

Net Crop Irrigation Requirement:

3.8 mm / day

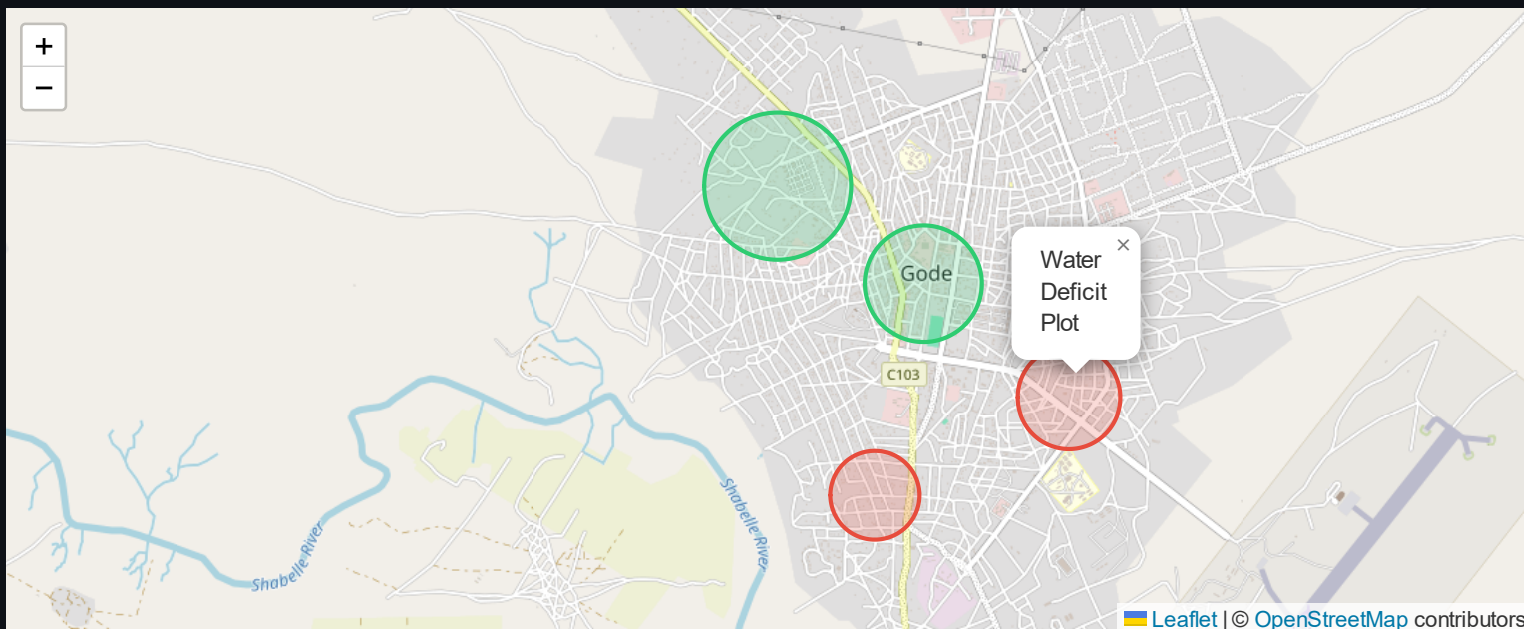

↑ Total Requirement

 Total Combined Daily ET:

6.2 mm

↑ Action Required

Interactive Crop Health Layer Map (Green=Healthy, Red=Water Stress)

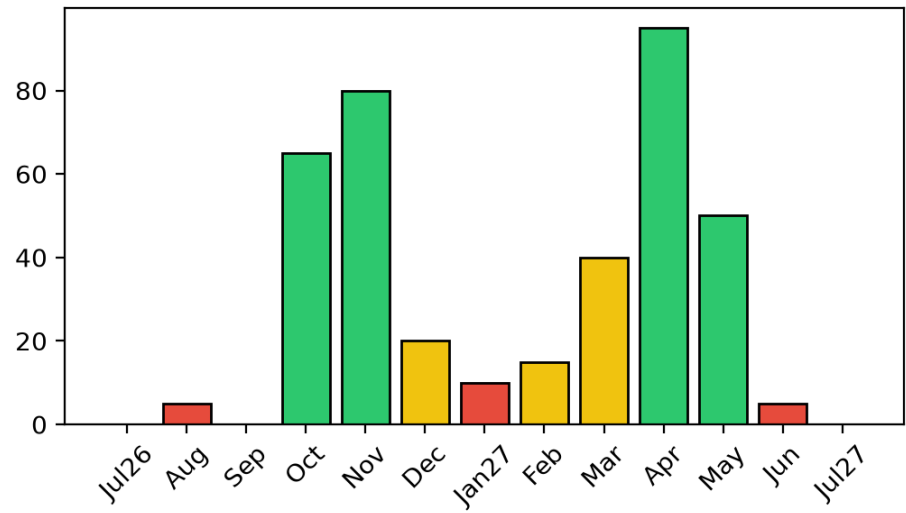

Green Zone: Fully turgid, high NDVI vegetation (Optimal moisture status)

Red Zone: Severe moisture deficit, low NDVI (Immediate irrigation required)

Annual Climate Planning (July 2026 - July 2027)

Red = No Rain | Green = Wet Season | Yellow = Light Showers

Gode Zone Satellite Climate Precipitation Histogram

FAO Soil Type Information

FAO Dataset: Gode soil consists mainly of Fluvisols (Clay Loam) requiring controlled drip systems.

Precision Agriculture Recommendations:

TODAY: High atmospheric demand (35°C), daily ET is 6.2mm. Trigger drip lines during early morning or late evening hours to maximize Water Use Efficiency (WUE). Reminder: Do not plant new crops in July due to dry spells.
